

Alberta companies will need 1.4 GW of renewable energy to meet their climate targets, with steep increases by 2025 and 2030.

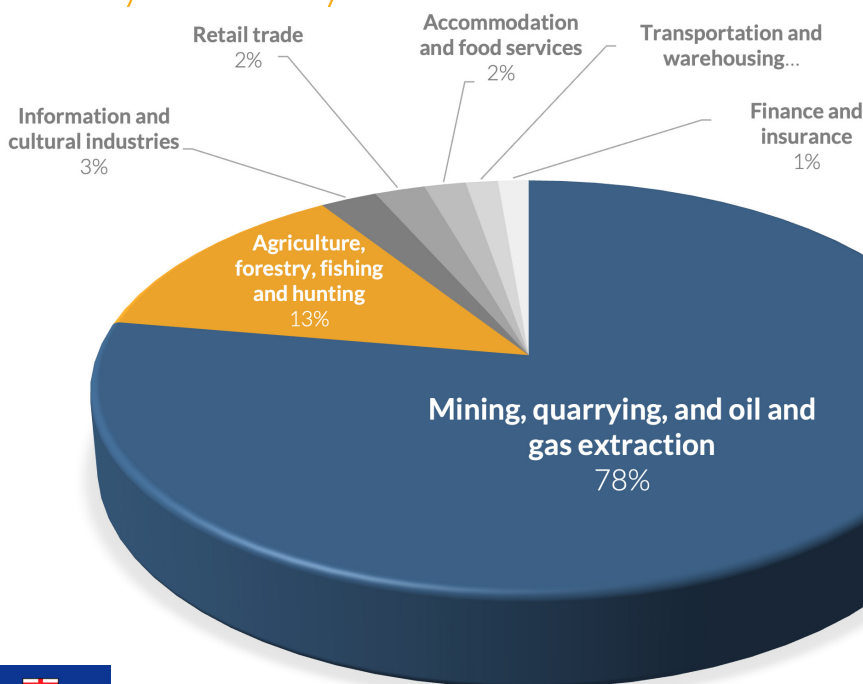

The province's oil and gas industry alone will drive 77% of this demand.

Renewable energy demand across years

ALBERTA: 19 % national demand

Renewable energy demand by industry

Alberta's open market has **already supported over 3 GW in vPPAs** — but significant demand remains. These targets represent both pressure and potential for further renewable investment, especially as companies face looming deadlines.
